

## ABSTRACT OF THE DISCLOSURE

[00115] A system and method for notifying an offline global computer network user of an online interaction in which the offline user could participate. The system and method specify notification criteria of the offline user, monitor activities occurring on the global computer network, compare the activities to the notification criteria, and, if the activities satisfy the notification criteria, forward an offline communication to the offline user, which notifies the offline user of the online interaction. Examples of the online interactions include chat rooms, game sites, instant messaging services, auctions, and calls made over the global computer network. Examples of the offline communication include calls to a wireline telephone, calls to a wireless telephone, messages to a caller identification device, messages to a wireless access protocol device, messages to a one-way pager, and messages to an interactive pager.
